

## Loon Survey Reobservation Data

Date of survey:     /     /       
 Water Body Name: **Morro Estuary**     County / Regional District: **San Luis Obispo**  
 Nearest Town: **Morro Bay / Los Osos**     State / Province: **CA**  
 Weather:     Tidal Stage:  Incoming  High  Outgoing  Low

### Color Leg-banded Loons Observed

For each color-banded loon you observe, place a dot on the attached map at the location you identified it, and assign a number to it, starting at 1. Then, in the row corresponding to that Bird Number in the table below, record the time observed, color legband combination of both legs, and any noteworthy information relating to your observation (bird behavior, plumage, etc). Record each bird only once per survey pass at location first seen. If another survey pass is conducted that day, use a new Reobservation Data Sheet for that pass.

Color codes: **S** - silver (USGS band), **R** - red, **O** - orange, **Y** - yellow, **G** - green, **B** - blue, **W** - white, **U** - uncertain Note any **STRIPE** or **DOT** patterns seen for each color.

Bird	Time observed	LEFT LEG COLORS		RIGHT LEG COLORS		Notes
		TOP (near body)	BOTTOM (near foot)	TOP (near body)	BOTTOM (near foot)

### Survey Area Loon Population Levels Observed

Referring to the map, note the total number of common loons (regardless of banded status) present within the boundaries of each survey plot. In the table below, each lettered row corresponds to each plot. Try to break totals down by age. If you did not survey a plot, leave the corresponding row blank. If you surveyed a plot, but saw no individuals, write "0". To the far right, record any other notes (behavior or other loon species present).

Plot	Time	Adults (>3yrs)	Subadults (1-3 yrs)	Juveniles (<1 yr)	Unknown Age	Notes (other loon spp. / ages, rafting, feeding, or social behaviors, etc)
